

Use case for printing transactions(#9)

Actions performed by the Actor	Responses from System
1. Clerk issues a request to get customer transactions.	
	2. System asks for the member id and two dates which are the period for which transactions are needed.
3. Clerk inputs member id and two dates.	
	4. If the dates and member id are valid, the system outputs info about all transactions completed by the user during the period of the two dates. For each transaction it shows the products bought and the total price.
5. Clerk prints out transactions and hands them to the customer.
